VIA HAND DELIVERY

Magalie Roman Salas, Esquire Secretary **Federal Communications Commission** 445 12th Street, S.W. Room TW-A325 Washington, D.C. 20554

Re:

Oral Ex Parte

In IB Docket No. 98-172

Dear Ms. Salas:

On February 15, 2000, Fixed Wireless Communications Coalition (FWCC) representatives met with Peter Tenhula and Mark Schneider, Legal Assistants respectively in the Offices of Commissioner Powell and Commissioner Ness to discuss issues relating to the 18 GHz band arising from the Notice of Proposed Rulemaking in the above cited Docket. The attached viewgraphs were used in the course of the aforementioned meeting.

Respectfully submitted,

FIXED WIRELESS COMMUNICATIONS COALITION

Tenard Robert Raish

List A B C D E

The 18 GHz Band

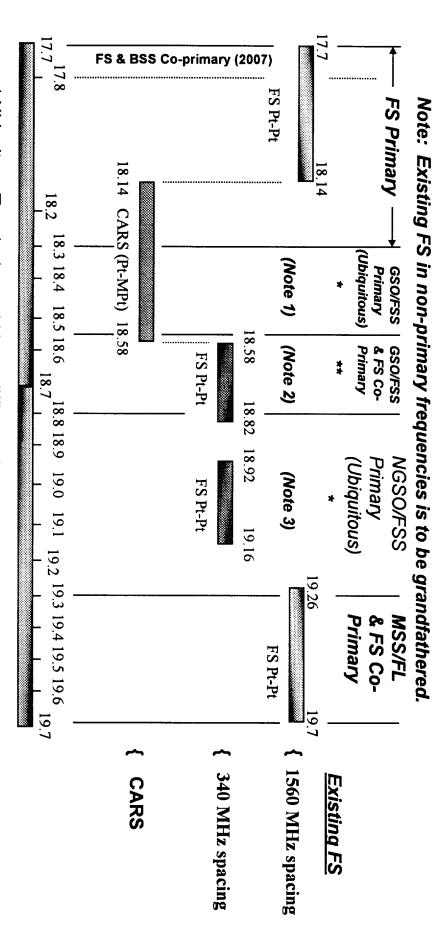

Fixed Wireless Communications Coalition

18 GHz Today

- Over 2500 duplex links in the Narrow Band (340 MHz-split) portion of the band.
- **→** Over 300% Growth since 1998.
- Effectively made "secondary" by NPRM
- Over 1500 duplex links in the Wide Band (1560 MHzsplit) portion of the band.
- ◆ Over 50% Growth since 1998.
- ◆ Either 80MHz or 200 MHz loss implied by NPRM

FWCC

18 GHz FCC Band Proposal

* Ubiquitous Terminals would have difficulty sharing with existing FS, especially CARS

** FS Co-primary of no use, since it is paired with secondary allocation

Note 1: ~14 Applications (incl. Teledesic)

Note 2: Same as Note 1 but NO ubiquitous (coordination req'd).

Note 3: Teledesic (Skybridge II)

Fixed Wireless Communications Coalition

18 Ghz NPRM

- Current 18 Ghz Plan:
- 880 MHz (440 Mhz Paired Go/Return) 1560 MHz Split
- 480 MHz (240 Mhz Paired Go/Return) 340 MHz Split
- ◆ CARs (Private Cable) Occupies 18.14-18.59 (440 Mhz)
- Total = 1360 MHz Plus 440 Mhz CARs
- NPRM Proposes FS Secondary from 18.3-18.55 and 18.8-19.3
- → Eliminates 40 MHz Paired (19.26-19.3 GHz) of wide-band (1560 MHz split). Effect is 80 MHz lost!
- Eliminates 240 Mhz paired (340 split). Effect is 480 MHz lost! Plus 280 Mhz lost of CARs Band.

Fixed Wireless Communications Coalition

18 Ghz NPRM (Cont.)

- NPRM Also Proposes to Give 17.7-17.8 Ghz to BSS in 2007!
- Co-primary, BUT FS and BSS cannot share!
- Another 200 MHz (100 MHz paired) Lost to FS
- PLUS Inefficient spectrum use by narrow band radios in wide-bandwidth channels (1560 MHz split)
- → Part 101 requires 1 B/S/Hz radios.
- ▶ 340 MHz-split channels are 5/10 MHz.
- ◆ 4-DS1 radios fit in 5 MHz
- Now 4-DS1 radios must go in 10 MHZ wideband channels.

- 18 GHz Relocation?
- Narrowband users could be relocated to wideband section.
- BUT: 18 GHz WIDEBAND channels (1560 MHz split) reduced spectrum! must be re-channelized to keep from squandering the
- → Significant compensation required. Radios CANNOT be retuned.
- Private Cable CANNOT be accommodated in the WIDEBAND channels.
- Must stay where they are or be completely relocated to another band (significant relocation costs).

Relocation (Cont.)

- 23 GHz Relocation?
- Complete relocation is out of the question.
- Band becoming increasingly congested in major metropolitan areas.
- Some availability degradation (vs 18 GHz).
- Commission must act on TIA petition for re-channelization
- 38 GHz Relocation?
- Shorter path lengths required in most cases.
- Higher rain-induced outage
- Economic penalty could inhibit FS application to many emerging business opportunities

FWCC

Conclusion

- The FS can give up the 340-MHz narrow band channels at 18 GHz.
- But, the wide band channels must be re-channelized.
- Bulk of the applications are for 4-DS1 radios.
- 100 MHz to BSS would result in an additional **UNACCEPTABLE** 23% FS frequency loss
- 23 GHz must also be re-channelized.
- → Required for efficient spectrum use to ensure FS growth.
- Private cable CANNOT be relocated into the wide band channels.
- In all cases, relocated FS must be fairly compensated! Fixed Wireless Communications Coalition
